

The 2018 Benchmark Report:

**An Analysis of Emerging
Trends In Student
Chromebook Usage**

A blue-tinted photograph of a classroom. In the foreground, a student is seated at a desk with a laptop. In the middle ground, a teacher is leaning over a desk, interacting with a student. Other students are visible in the background, some using laptops. The overall scene is a typical classroom environment.

An Inside Look at Student-Driven Device Usage

As technology usage in education has skyrocketed, so has the need to gain a deeper understanding of how technology is being utilized - both inside and outside of the classroom. GoGuardian's 2018 Benchmark Report gives you an inside look into organic student engagement and browsing patterns. The Benchmark Report analyzes the aggregate anonymous device usage of 5 million K-12 students across the country.

Methodology

GoGuardian analyzed student activity at home and at school across grade levels and subject areas based on Chromebook usage in the fall of 2016 and the fall of 2017. The top 500 educational sites were selected and analyzed using an index that equally weighted the percent of students who visited the websites and the percent of time spent on each site.

For the list of top trending sites, we focused on student-driven educational sites, and omitted LMS, SIS, and

textbook publisher sites. The latter reflected curriculum and teacher-driven usage, and were not indicative of organic student engagement and browsing patterns. In addition, G Suite for Education sites and apps far surpassed other sites in usage metrics, which we believe speaks to the value Google apps bring to educators and students alike. We devoted a separate section to data related to G Suite, so as not to overshadow other findings.

Device Usage Categories: Inside and Outside of the Classroom

Student device usage can be broken down into three overarching categories:

1. G Suite for Education - including Google Docs, Sheets, Slides, etc.— account for 68.5% of total time spent by students on the top 100 sites.
2. Publishers and Learning Systems — including textbook publisher, LMS, and SIS sites — account for 11.3% of total time spent on the top 100 sites.
3. Student-driven educational sites account for 20.2% of total time spent on the top 100 sites. The list of top student-driven educational sites is included below, and reflects students' organic browsing patterns.

G Suite for Education

Six of the Top Ten Educational Sites

G Suite for Education (GSFE) far surpassed other sites and apps in student usage metrics, accounting for six of the top ten educational sites. G Suite continues to play a prominent and valuable role in America's classrooms — more than half the nation's primary and secondary school students use G Suite, as reported by the New York Times.

Average usage of time spent between Google Sites

Educational Sites & Web Apps

What's Trending

GoGuardian analyzed the top 500 educational sites by subject and by grade level, based upon student activity on Chromebooks in the fall of 2016 and the fall of 2017. GoGuardian's research team selected the top trending sites in education, based upon an index that equally weighed the percent of students who visited the websites and the percent of time spent on each site.

Key Findings

- **Rise in interactive gamification:** Data trends indicated a rise in the gamification of digital learning, with Kahoot holding the #1 spot for Educational Sites overall and Cool Math Games taking the #1 spot for Trending Sites (which evaluated YoY growth).
- **Digitizing study patterns:** The popular study application Quizlet occupies the #2 spot on top educational sites overall, and the #1 spot for middle school and high school students. This is consistent with the larger edtech landscape, where digital flashcards, self-made quizzes, and online study tools are on the rise.
- **Personalized content:** Websites offering personalized learning experiences were prevalent across all grade levels, with Khan Academy in the top ten sites at the elementary, middle school, and high school grade levels.
- **Comparison by subject:** When separating the list by academic subject area, sites related to Language Arts and English were more common than any other subject area in the top 500 websites.

Device Usage at School and Home

The Rise of Chromebooks in Education

As reported by [Edsurge](#) and [The Journal](#), Google Chromebooks have captured the dominant share of the K-12 mobile computing market in the United States for the second year in a row. Google Chrome OS's share of school-purchased mobile devices surged to a 59.8% share in 2017, up 21 percentage points from 2014.

* Total sales data as of Q3 2017

Device Usage at School and Home

More Students are Bringing Devices Home

GoGuardian analyzed the aggregate anonymous data of 5 million K-12 students, and found that the percent of student devices being used at home steadily increased from the fall of 2016 to the fall of 2017 across grade levels. The largest percentage increase in device usage at home was at the elementary school level, increasing 132%, from 11.7% in 2016 to 27.2% in 2017. Overall, Chromebook usage at home was more prevalent in the higher grade levels: 53.4% of middle school devices, and 57.1% of high school devices were used by students at home in 2017.

Device Usage at School and Home

After the School Day Ends: A Look Into Academic & Non-Academic Device Usage

Websites visited by students outside of school were separated into two key categories: Academic and Non-Academic. Web sites were classified as Academic if their primary application directly related to K-12 curriculum and learning.

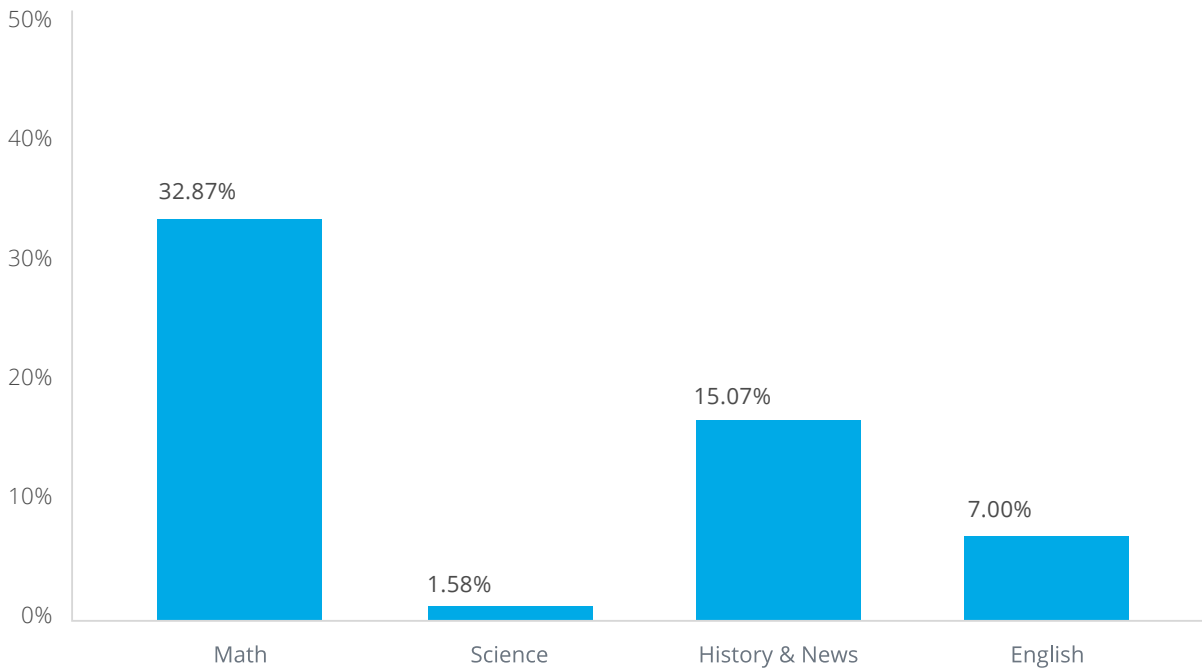

Key Finding: At home, students spent 68.2% of their time on Academic sites, and 31.8% of their time on Non-Academic sites.

Device Usage at School and Home

Chromebook Usage at Home: Time Spent By Subject Area

When analyzing time spent on Academic sites at home, Math far exceeds any other subject area in terms of percent of overall student time spent. 32.87% of student time was spent on Math sites, 15.07% on History and News sites, 7% on English and Language Arts sites, and only 1.58% on Science sites.

Device Usage at School and Home

Top sites at home

As noted in “Methodology” above, we focused on student-driven educational sites, and omitted LMS, SIS, and textbook publisher sites. The latter reflected curriculum and teacher-driven usage, and were not indicative of organic student engagement and browsing patterns. We also dedicated a separate section above to G Suite for Education sites and removed them from this list, so as not to overshadow other findings.

Device Usage at School and Home

Take home encourages digital citizenship

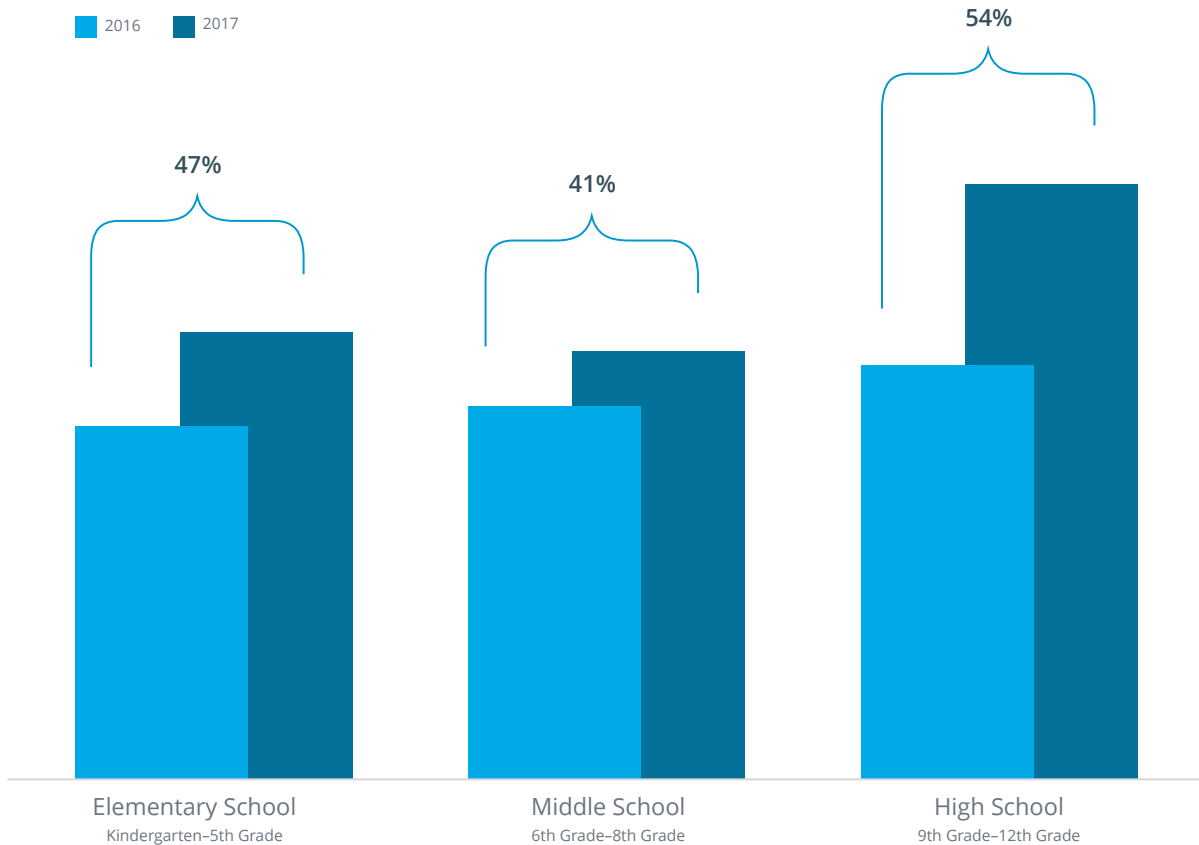

The rise in students taking home devices points to a larger movement focused on achieving greater equity and accessibility to technology in schools across the country. As detailed in the [U.S. Department of Education's National Education Technology Plan](#), students need frequent and appropriate access to technology to effectively communicate, research, create, prepare for the workforce, and acquire valuable digital citizenship skills. Digital citizenship isn't just about students embracing technology - but about students using technology in such a way that is appropriate, responsible, intelligent, and safe. Taking devices home encourages learning within appropriate boundaries, effectively extending the school day and enabling students to practice good digital citizenship at home and at school.

Chromebook Usage & Filtering

The Rise of Students Using Chromebooks

From 2016 to 2017, the number of students on Chromebooks steadily increased across grade levels; the highest growth was among high school students. The number of high school students using Chromebooks grew at a rate of 54%, the number of middle school students on Chromebooks grew 41%, and the number of elementary school students on Chromebooks grew 47%.

Chromebook Usage & Filtering

Average Number of Sites Visited Per Month

The data from 5 million students shows that students are visiting more unique websites and webpages year-over-year. Not only was there a demonstrable increase in the number of students using devices and time spent on school devices from 2016 to 2017, but there was also a hike in the amount of sites visited per student. The number of sites visited monthly, per student, grew 98% among high school students, 145% among middle school students, and 135% among elementary school students.

Chromebook Usage & Filtering

Content Filtering: Average Number of Sites Blocked Per Month

In order to focus students on school-related tasks, comply with federal and state laws, and enable students to explore the internet safely, most schools have almost universally adopted online filtering. The 2018 Benchmark Report examines the number and growth of sites blocked by filters, as well as the most commonly blocked sites on school devices. The data shows that the average number of websites blocked per month **more than doubled** from 2016 to 2017 across grade levels.

The average number of sites blocked per month grew 193% for elementary school students, 140% for middle school students, and 173% for high school students. Interestingly, the growth rate of blocked sites was highest at the elementary school level, which also reflects the increase in elementary school students on devices from 2016 to 2017. The middle school grade level exhibited the highest number of blocked sites, as well as the highest number of sites visited on a monthly basis.

Chromebook Usage & Filtering

Who is getting blocked in 2016?

In 2016, 43.8% of students blocked by internet filtering were high school students, 40.8% were in the middle school grades, and only 15.6% of students were elementary school students. These percentages were proportional to the grade level breakdown of students using Chromebooks in 2016.

Chromebook Usage & Filtering

Who is getting blocked in 2017?

In 2017, there was less of a disparity between grade levels in regards to students getting blocked on Chromebooks. The greatest percentage of blocked students was still high school students at 41%, with middle school students shortly behind at 39%, and 19.3% of students blocked in the elementary school grades.

Smart technology needs smart management.

As more schools implement technology programs—either through 1:1 initiatives or shared carts—the need for powerful, easy-to-use device management tools is greater than ever. From device assignment and repair tracking, to web filtering and classroom management, many districts often end up using a patchwork of tools and apps to accomplish their strategic technology goals.

With a full suite of position-tailored products designed and built just for Chromebooks, GoGuardian makes it easy for school districts to manage large or small device deployments, keep their students safer online, and gain valuable insights into how their technology programs are working.
